

# WOODEN SPORT FLOORS

## ADIPREMIUM

**Adipremium** is a sports flooring specifically designed for fitness facilities and for sports halls requiring a **high level of elasticity**, optimal for all gyms, even for those with special requirements, therefore Adipremium is suitable for higher level sport plants.

Suitable especially for sports requiring **high elasticity**, as artistic gymnastics.

Sports flooring/parquet **ADIPREMIUM** with CE marking, composed of a sheet of nylon vapor barrier extended to all the substrate surface in order to avoid any humidity penetration upon which is placed in work, the sports performance system composed of:

- **Polyurethane Mat** can provide the right elasticity to the system, with shock absorption optimizing action and the subsequent release of energy. **Thickness: 10 mm.**
- **Rubber buffer** (thickness: 30 mm).
- **Waterproof composite panels in plywood** with no less than five layers, overlapped with the first layer aligned lengthwise to the gym and the second layer overlapped by an angle of 30° from the above mentioned direction, fixed one each other by special wood screws. **Thickness: 9 mm.**
- **Pre-finished parquet 3 strips 14mm, BEECH/OAK** essence, with special click joint on its long sides and heads, which ensures a perfect seal in tension and flatness of the paving and prevents the detachment of the boards from one another. As laying system we use the "secret nailing technique". **Noble wood: 4 mm.**

**Overall Adipremium thickness: 62 mm.**
