

WOODEN SPORT FLOORS

ADITHERMO

Adithermo is a sports floor designed specifically for fitness facilities and sports halls requiring **good elasticity**, ideal for all gyms, even those with special needs, featuring **underfloor heating**.

The system is suitable for floor heating, because it allows a uniform and constant heat distribution over the entire paved surface.

Sports flooring/parquet **ADITHERMO** with CE marking, composed of a sheet of **nylon** vapor barrier extended to all the substrate surface in order to avoid any humidity penetration upon which is placed in work, the sports performance system composed of:

- **Agglomerated polyurethane foam Mat**, that can provide the right elasticity, able to optimize the shock absorption and the following release of energy.
Thickness: 10 mm.
- **Waterproof composite panels in plywood with no less than seven layers**, fixed together by special clip to make the surface smooth and planar. **Thickness: 9 mm.**
- **Pre-finished parquet 3 strips 14mm**, **BEECH/OAK** essence, with special click joint on its long sides and heads, which ensures a perfect seal in tension and flatness of the paving and prevents the detachment of the boards from one another. As laying system we use the "secret nailing technique".
Noble wood: 4 mm.

Overall Adithermo thickness: 33 mm.
